Grand Parking for medium to large size solution

Grand Parking System is a multi-floor, Cart type parking system that quickly and safely parks as many vehicles as possible within a confined space. Because the parking facility executes the parking and extracting vehicles simultaneously, it enhances spatial efficiency, which makes it perfect for parking facilities of large-sized building.

Steel structure

The main frame of Grand Parking System is made of Structural Steel. It is designed to withstand the Structural dead load as well as the live load of the vehicles.

Machinery

The mechanical components of Grand Parking System include; pallets onto which vehicles are loaded and transported; carts that transport the vehicles horizontally; lifts that transport the vehicles vertically; drive parts that operate each unit; guides and rails; containment unit that stores the vehicles; lift platforms on the entry floor; and automatic door at the entrance.

Electrical Work

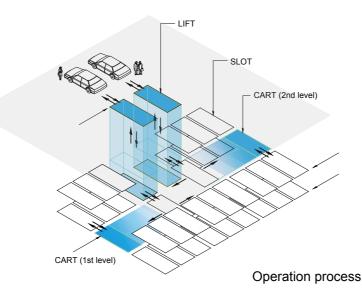

Electrical works include pipe-laying, wiring, grounding, lighting of the entry floor, and installing the wiring ducts within the parking facility. If Grand Parking is installed and contained within a larger building, the grounding work may be omitted unless specified otherwise.

Control Work

Control works include installations of various sensors, the main control panel, the local control panel, the operation panel, the hardware and the software programs of the computer and the PLC.

Appurtenant Devices

Appurtenant Devices Other devices include the vehicle guiding lamps above the automatic door; the induction indicators and mirrors along the vehicle-entry.

Operation process

The nearest available pallet selection is fullycomputerized. The car lift will elevate the car to the required level, and the cart will transport the car to the designated pallet slot for parking. Retrieval of car is just the reverse process.

Technical specification (Typ.)

Parking cap	acity			45 slots		
Туре				GRF45L / GRF45SU		
Avrg. tact t	ime			90~110 sec/car		
Temperatur	e range			-25°C ~ + 45°C		
		Q'ty		2 sets		
	LIFT	Elevating	Motor	22~30Kw x 4P x 1/39.79 geared motor		
			Speed	40~45 m/min		
			Mechanism	Ø14 x 8 wire ropes		
			Motor	2Kw x 4P x 1/30 geared motor		
		Shifting	Speed	30~46 m/min at max.		
			Mechanism	Driving at the friction wheel		
		Q'ty		3 sets		
			Motor	2.2~3.7 Kw x 4P x 1/10 geared motor		
		Traveling	Speed	60~80 m/min		
	CART		Mechanism	Direct driving at the cart wheel		
		Shifting	Motor	2.2~3.7 Kw x 4P x 1/60 geared motor		
			Speed	35~465 m/min at max		
			Mechanism	Driving at the friction wheel		
Equipment		Picking	Motor	0.5Kw x 4P x 1/60 geared motor		
			Speed	6.3 m/min at max.		
			Mechanism	Direct driving at the pinion and rack		
	AUTO DOOR	Q'ty		2 sets		
		Opening si	ze	2600mm(W) x 2100mm(H)		
		Opening ty	/pe	upside sliding door		
		Motor		0.2Kw x 4P x 1/20		
		Opening speed		15 ~20 m/min		
	CONTROL	Speed control		Vector inverter		
		Sequence control		PLC & computer control		
		Operation	board	Touch screen and computer		
		Q'ty		45 pallets		
	PALLET	Size		2100mm(W) x 5300mm(D)		
		Pallet rail		100 x 100 x 3.2t square pipe		
	FRAME			Structrual steel		
Power				AC 380V, 50/60Hz, 3PH		

Available car in GRF L series

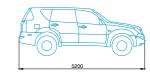

Total length	5200mm		
Total width	2100mm		
Total height	1600mm		
Total weight	2150kg		

Available car in GRF SU series

Total length	5200mm				
Total width	2100mm				
Total height	1900mm				
Total weight	2400kg
